CREATURE FEATURE THE MOURNING CLOAK

'M IN AWE OF SEEMINGLY fragile things that survive our brutal winters, like delicate butterflies. Among the first species of butterflies to emerge in springtime, often while snow lingers on

the ground, is the mourning cloak. Named for the somber dark brown color of its outer (closed) wings, its inner (open) wings are quite lovely, with a row of bright blue spots and a creamy yellow or beige border. When resting on a dark tree trunk or branch, the closed wings resemble bark, offering protective camouflage. They flit about, seeking tree sap, their main food source. So how do these delicate beauties survive the winter? Mourning cloaks hibernate as adults, tucked away in hollow logs or other sheltered nooks. They overwinter in a stage called "diapause," where metabolic and respiratory rates are reduced. To keep from freezing, they reduce the amount of water in their blood and replace it with antifreeze

agents like glycerol and sorbitol. This process is triggered by

shorter daylight hours as summer progresses and takes time to complete by the onset of cold weather. To protect them

from freezing after a false spring, diapause is only reversed

after a sustained period of winter is met and days lengthen.

Mourning cloaks often emerge in spring looking tattered and

worn, as they are 8-9 months old. Ironically, these amazing

winter warriors will die shortly after mating in the spring.

DOVI MOTORS, INC. CELEBRATES 70TH ANNIVERSARY

NE OF THE MOST TELLING features of the age of Dovi Motors is the gumball machine that sits just inside the entrance door. While other gumball vending machines of today require you to deposit a quarter or sometimes even two, the machine at Dovi Motors only requires you to deposit one thin dime.

Tony Dovi, a mechanic who had worked on B-17 engines, started his automobile repair shop on the corner of Warren and Pearl Street Extension, working on tubes, tires, and batteries. From these humble beginnings, the business moved to its current location on Tompkins Street and became Dovi's Garage, with a full-service, two-pump Texaco service station. In 1956, the showroom was added. Then the Dovis bought the building next door and added the body shop in 1987. The

dealership is a three-generation business, involving Tony, his sons Phil, Tom and Joe, and their sons Jesse, Luke, and Tommy.

Dovi was a Mercury-Lincoln dealership until 2008. They switched to Ford brand during the global economic crisis when Ford decided they no longer wanted to shoulder the expense, and offered Dovi the Ford enterprise.

The change brought Dovi's sudden prosperity, because while Ford styles were remarkably similar to the Mercury-Lincoln cars, they were significantly less expensive. The sudden boom in business became overwhelming, so Dovi hired Erin Robinson, Dovi's office manager, in 2009, and Robin Riley, parts manager, was also added.

Jesse Dovi, who came on part-time in 2008, believes that some of the key elements that have helped the steady growth have been Kevin McCaskill, Dovi's service advisor, whose entire career encompasses decades of service experience, and Josh

Dickinson, both of whom he describes as "strong service individuals".

attributes Dovi's continued growth to oldschool business practices. "We don't shuffle them around to different people. We don't have a flashy facility. This is a simple place. We are simple people; we are Cortland people," he said. "When you call here, you get a person on the phone. We have the easiest buying process: all prices are clearly marked on the website and on the lot. Luke and I handle all the sales. When someone comes in to look for a vehicle, they can sit down with one person and to know about the car, including its history, and their trade-in options."

Dovi Motors, Inc. is located at 263 Tompkins St., Cortland, NY. You can come in and browse, or you can shop online them online at www.dovimotors.com. They are open Monday, Wednesday and Thursday, 8-7; Tuesday and Friday, 8-5, and Saturday, 8-12. If you have questions, Sales can be reached at 877-813-9997, Service at 877-814-7449, or Parts at 877-816-6778. Stop by and wish Dovi Motors a Happy 70th Anniversary!

Dear Family, Friends and Business Owners,

We would like to take a moment to tell you about our mother Sherry Kleine, who is in need of some support. Sherry was diagnosed with stage IV metastasis breast cancer that has spread to the bone. MAINTENANCE TIPS FROM BELL'S:

How to avoid Breakdowns?

The best thing you can do to avoid breakdowns is to perform regular scheduled maintenance. Such as changing your oil & filter every 3,000 miles. Catching any small problem before it becomes a big problem can save you a lot of money. We can talk to you about known problems for your specific make and model as well as any maintenance required.

Having your oil changed is one of the most important maintenance procedures you can do for your car. If you follow good auto maintenance you will extend the lifetime of your vehicle by thousands of miles.

- Change regular oil every 3,000 miles.
- Change synthetic oil every 5,000 miles.
- Change your antifreeze every 2 years.
- Change your brake fluid every 2 years.
- Change your transmission fluid every 30,000 miles.
- Do scheduled 15, 30, 60 and 90,000 mile
- Always check for potential problems before they happen.

Thank you to our customers for their patronage over the past 30+ years!

MIKE'S FISH TANK SHARKS

SHARKS ARE VERY POPULAR IN todays aquarium market. They are not true sharks but some do look like a real shark.

The redtail black shark is the most aggressive. From 1996 until 2011 they were believed to be extinct in the wild.

There is no evidence that collection for the aquarium trade is responsible for the species' decline, and it is more likely that construction of dams and draining of swamps that took place during the 1970s was to blame.

The red-tailed black sharks seen in the aquarium trade today are all captive bred. Another popular shark is the Tricolor or Bala sharks. It is endangered because the population decreased by 50% in the last 10 years. I do not see them readily available as I used to due to that reason. They are mostly a peaceful shark and can get very big. They do best in groups of 2 and are mostly farm raised now.

The iridescent shark is a member of the shark/catfish family and also get very big. They prefer temperature range of 72-79°F. In the wild, They prefer large bodies of water similar to the deep waters of their native Mekong river basin.

They are a peaceful community fish but are prone to catching Ick, white spot disease. For that reason, keep an eye on them so if they come down with ick, you can treat right away.

It's mostly juvenile iridescent sharks that are sold as pets for home aquariums, they are not easy fish to keep. While they can survive in a home aquarium, iridescent sharks are schooling fish that prefer groups, are accustomed to living in rivers and are active fish that require space. They have very poor eyesight, so detected movement from outside of their habitat can be seen as a threat. If stressed, their first instinct is to flee; a blind dash can cause injury in an aquarium

These injuries may result in the fish sinking to the bottom, where it may lie on its side or back until it recovers. Often when catching the iridescent shark, it will almost play dead and once back in the tank, acts fine and swims off.
